Muhammad Aleem

DevOps Engineer · AWS · Kubernetes · Terraform · CI/CD

+92 314 0145490 | muhammadaleemtoor@gmail.com | linkedin.com/in/muhammad-aleem-89bab4336 | Lahore, Pakistan

PROFESSIONAL SUMMARY

DevOps Engineer with **3+ years of experience** automating deployments and managing cloud infrastructure as code (IaC) on **AWS**, **Azure** and **Hetzner Cloud**. Designs and maintains **CI/CD pipelines** with **Jenkins** and **GitHub Actions**, containerizes applications with **Docker**, runs them on **Kubernetes (EKS/AKS)** and provisions AWS infrastructure with **Terraform**. Strong **Linux**, networking and security fundamentals, plus hands-on **DevSecOps** and end-to-end **observability** experience with Prometheus, Grafana and the ELK Stack.

TECHNICAL SKILLS

Cloud Platforms: **AWS** — EC2, ECS, EKS, ECR, Lambda, S3, RDS, VPC, IAM, Route 53, CloudWatch · **Azure** — VMs, AKS, Blob Storage, Azure DevOps, Entra ID · **Hetzner Cloud**

Containers & Orchestration: **Docker**, Docker Compose, multi-stage builds, Docker Swarm, Docker Hub, **Kubernetes**, **Helm**, AWS EKS, Azure AKS, autoscaling (HPA)

CI/CD & IaC: **Jenkins**, **GitHub Actions**, GitLab CI/CD, **ArgoCD** (GitOps), **Terraform**, CloudFormation, **Ansible**

Scripting & Version Control: **Bash**, YAML, HCL (Terraform), **Git**, GitHub, GitLab

Monitoring & Observability: **Prometheus**, **Grafana**, **ELK Stack** (Elasticsearch, Logstash, Kibana), Alertmanager, Jaeger, Zabbix, CloudWatch

Security & DevSecOps: **SonarQube**, **Trivy**, **OWASP ZAP**, Wazuh, SSL/TLS, firewalls, **least-privilege IAM**, SELinux, system hardening

Linux & Networking: **Ubuntu**, **CentOS**, RHEL, Fedora, LVM, filesystems, partitioning, SSH, users & groups, ACLs, **TCP/IP**, DNS, DHCP, subnetting, log analysis

Web, API & Caching: **Nginx**, Apache, **HAProxy**, AWS API Gateway, ALB ingress, **Redis** caching

PROFESSIONAL EXPERIENCE

DictaLabs

Mar 2026 – Present

DevOps Engineer · Full-time

- Manage and automate cloud infrastructure on **AWS** using **Terraform**, keeping every environment consistent, reproducible and fully version-controlled in **Git**.
- Build and maintain **CI/CD pipelines** for automated build, test and deployment across multiple services.
- Run containerized workloads on **Docker** and **Kubernetes**, handling rolling updates, scaling and zero-downtime deployments — sustaining **99.9% uptime**.
- Improved application performance by **30%** through **Redis caching** and background task optimization.
- Maintain **monitoring and alerting** with **Prometheus**, **Grafana** and **CloudWatch** to keep services reliable and reduce mean time to detect (MTTD).

BetaCodes (formerly Forbmax)

Oct 2024 – Mar 2026

DevOps Engineer · Full-time

- Designed and implemented **CI/CD pipelines in Jenkins** for automated build, test and deployment workflows — cutting deployment time by **40%**.
- Deployed **Dockerized multi-tier applications** (frontend, backend, database) and managed them on **Kubernetes (EKS)**.
- Provisioned AWS infrastructure with **Terraform** — EC2, ECS, ECR, EKS, Lambda and VPC, with **least-privilege IAM** roles.
- Integrated **DevSecOps** checks (**SonarQube**, **Trivy**, **OWASP ZAP**) into pipelines for code-quality and vulnerability scanning — reducing security incidents by **50%**.
- Set up monitoring, logging and alerting with **Prometheus**, **Grafana**, **ELK Stack** and **CloudWatch**, improving overall uptime.

Digzy Tech

Aug 2023 – Oct 2024

Linux Administrator / DevOps Engineer · Full-time

- Managed **Linux production servers** (Ubuntu, CentOS) on **AWS EC2**, handling security hardening, patching and performance tuning to keep them stable.
- Administered user accounts and permissions, **ACLs**, **LVM storage** and filesystems.
- Configured and troubleshot **TCP/IP networking**: DNS, DHCP, subnetting and gateways.
- Deployed and supported core services including **DNS**, **Samba**, **Apache** and mail servers.
- Performed **log analysis** and system monitoring, detecting and fixing production issues before user impact.

PROJECTS

AI-Powered Multi-Tier Application Deployment

AWS · Docker · Kubernetes (EKS) · Terraform · Jenkins · GitHub Actions · Prometheus · Grafana

- Deployed a multi-tier **React – Node.js – MySQL** application to **Kubernetes (EKS)** on AWS, with infrastructure provisioned through **Terraform**, automated CI/CD and **zero-downtime deployments**.
- Containerized every component with **Docker** for consistent deployments across environments.
- Automated build, test, **security scanning** and deployment through **Jenkins** and **GitHub Actions**, embedding **DevSecOps** gates before release.
- Set up **Prometheus** and **Grafana** for real-time monitoring and alerting.

Production-Grade EKS Deployment with Full-Stack Monitoring

AWS EKS · Terraform · Docker · Helm · Prometheus · Grafana · Alertmanager

- Provisioned the full AWS environment with **Terraform** — VPC, subnets, security groups, **IAM roles** and an **EKS cluster** with managed node groups.
- Containerized the application with **Docker**, pushed images to **Amazon ECR** and deployed to EKS through **Helm charts** with per-environment values.
- Exposed services via an **ALB ingress with TLS** and configured the **Horizontal Pod Autoscaler** to absorb traffic spikes without manual intervention.
- Deployed **Prometheus** and **Grafana** dashboards for CPU, memory, pod restarts and request latency, plus **Prometheus alerting rules** (routed via **Alertmanager**) for CrashLoopBackOff and node pressure.

EDUCATION

University of Agriculture, Faisalabad — Bachelor's Degree

PROFESSIONAL STRENGTHS

Automation-first mindset · **Incident response** · **Production troubleshooting** · **Security-by-default thinking** · **Documentation** · **Cross-team collaboration**
